

# MASHKOOR PATEL

## Data Engineer — Cloud Data Pipelines & Warehousing

Bhusawal – 425201, Maharashtra, India | +91 7378517681 | patelmashkoor8@gmail.com | [linkedin.com/in/mashkoorpatel](https://www.linkedin.com/in/mashkoorpatel)

### PROFESSIONAL SUMMARY

Data Engineer with hands-on experience designing, building, and optimizing ETL/ELT pipelines, managing cloud data warehouses, and delivering clean, AI-ready data for enterprise analytics. Proven proficiency in SQL, Python (PySpark, Pandas), Apache Spark, Snowflake, Azure Data Lake, and Azure Synapse, with foundational exposure to Google Cloud Platform. Experienced working in Agile/Scrum environments using Jira, translating complex business requirements into scalable data pipeline architectures, and collaborating across cross-functional teams. Eager to contribute to your company's data modernization initiative — migrating Oracle Data Warehouses to a modern cloud-native data lake and building the data foundation for AI-driven decision-making.

### TECHNICAL SKILLS

**Data Engineering & Pipelines:** ETL/ELT Design & Optimization, Apache Spark (PySpark), Distributed Data Pipelines, Data Transformation, Schema Design, Data Modeling, Big-Data Processing

**Databases & Query Optimization:** SQL (Complex Queries, Joins, Data Manipulation), PostgreSQL, Snowflake, RDBMS, Data Warehousing

**Cloud Platforms & Data Lakes:** Azure Data Lake (ADLS Gen2), Azure Synapse Analytics, AWS (S3, EC2)

**Languages & Scripting:** Python (Pandas, NumPy, PySpark), Java (Foundational — Core Java Internship), PowerShell, Unix/Linux Shell

**Data Quality & Governance:** Data Validation, NULL Mapping Controls, Schema Alignment, Data Consistency, Pipeline Monitoring, Root Cause Analysis

**Analytics & Visualization:** Power BI (Dashboard Design, KPI Reporting), Tableau

**API & Integration:** OAuth 2.0 (API Integrations), REST API Connections, Multi-source Data Ingestion

**Tools & Agile:** Git, Jira (Agile/Scrum), Postman, Django (Backend APIs), Automation Anywhere A360

### PROFESSIONAL EXPERIENCE

#### Junior Software Engineer – Data & Analytics | Pingahla

Remote – Pune, India | Jun 2025 – Present

- Design, build, and optimize ETL/ELT data pipelines using Python and Apache Spark to process large-scale enterprise datasets, implementing custom partition strategies and performance-tuned JDBC reads to eliminate data latency bottlenecks for downstream analytics consumption.
- Manage and maintain cloud data warehouses and data lakes across Snowflake, Azure Data Lake (ADLS), and Azure Synapse Analytics — executing schema design, structural alignments, NULL-mapping controls, and data validation to ensure clean, AI-ready data availability.
- Write and optimize complex SQL queries across PostgreSQL and Snowflake warehouses for data profiling, transformation, and root-cause analysis of API payload metrics and high-velocity query paths.
- Integrate and manage data from multiple sources including REST APIs, cloud storage, and relational databases; enforce data quality standards and schema consistency across the full data lifecycle.
- Diagnose and resolve data pipeline ingestion failures through structured monitoring, proactive logging, and systematic troubleshooting — improving ingestion reliability for enterprise workflows.
- Collaborate in an Agile environment with cross-functional product and engineering teams via Jira to gather data requirements, translate them into scalable pipeline designs, and document architectural standards.
- Develop and deploy automated fail-safe mechanisms including execution kill-switches and server configurations to safely manage distributed pipeline tasks in production environments.

#### Data Analyst Intern | TechMaster

Onsite – Bhusawal, India | Jun 2024 – Dec 2024

- Executed advanced SQL queries — including complex joins, aggregations, and subqueries — to investigate data inconsistencies, perform data profiling, and validate integrity across internal corporate relational databases.
- Designed and maintained interactive Power BI dashboards tracking critical business KPIs, transforming raw datasets into actionable insights and communicating findings clearly to both technical and non-technical stakeholders.

- Generated automated data quality alerts and recurring operational reports to maintain data governance standards and support compliance requirements.

## PROJECTS & PORTFOLIO

---

### Multi-Source ETL Pipeline — Advertising & Finance Data Connectors | Pingahla

*Jun 2025 – Present*

- Designed and developed end-to-end ETL pipelines to extract, transform, and load data from multiple third-party advertising and financial platforms — including Snapchat Ads, LinkedIn Ads, and Navan — consolidating data into Snowflake as the central data warehouse for downstream analytics consumption.
- Engineered OAuth 2.0-based authentication connections across Azure Data Lake, AWS S3, and relational databases to enable secure, automated data ingestion from diverse source systems — ensuring seamless multi-platform data integration.
- Validated pipeline reliability by stress-testing multiple connectors against large-scale datasets, identifying and resolving schema inconsistencies, data type mismatches, and ingestion failures to ensure data quality and consistency at scale.
- Supported team onboarding and codebase setup by guiding colleagues through environment configuration, dependency resolution, and pipeline error debugging — reducing ramp-up time and improving team-wide development velocity.
- Maintained clear, proactive communication with team leads and business stakeholders on pipeline status, blockers, and data availability — ensuring alignment between technical execution and business requirements throughout the project lifecycle.

### Automated Data Ingestion Bot — RPA Pipeline | Pingahla

*May 2026 – Present*

- Engineered an unattended Automation Anywhere A360 RPA pipeline to automate extraction, filtering, and routing of encrypted unstructured data payloads — directly feeding clean data into enterprise analytics workflows.
- Implemented multi-layered metadata validation and automated staging-directory purge logic to enforce data consistency, pipeline isolation, and governance standards across ingestion runs.
- Designed dynamic file-path resolution and robust metadata parsing mechanisms to maintain uninterrupted pipeline execution across varied production environments.

## EDUCATION

---

### B.Tech in Computer Engineering | KCE Society's College of Engineering and Management, Jalgaon

*Aug 2021 – Jul 2024 | CGPA: 7.43 / 10*

### Post Matric Diploma in Computer Engineering | Government Polytechnic, Jalgaon

*Jul 2018 – Jul 2021 | 84.23%*

## CERTIFICATIONS & TRAINING

---

- [AWS Certified Cloud Practitioner](#)
- [AWS re/Start Graduate – 3-month full-time training: Cloud Computing, Networking, Hands-on AWS Labs](#)
- [Google Data Analytics Professional Certificate](#)
- [Applied Data Science with Python – Level 2 \(IBM\)](#)
- [Data Analysis with Python – IBM SkillsBuild \(DA0101EN\)](#)
- [Python with Advanced AI – Skill India Digital, IIT Madras](#)
- [Microsoft Learn: Azure Architecture & Services \(Badge\)](#)
- [Microsoft Learn: Azure Identity, Access & Security \(Badge\)](#)
- [Microsoft Learn: Get Started with Microsoft Data Analytics \(Badge\)](#)
- [Microsoft Learn: Get Started Building with Power BI \(Badge\)](#)
- Soft Skills: Communication, Group Discussion & Presentation – TCSion
